

Step #2: Life Skills: Create Your Life-Line (100 points!)

On a sheet of paper/construction paper/poster board, etc, create a lifeline that stretches from your birth until your old age. (Use the information from the lifespan calculators done earlier in class to estimate your age.) FOLLOW THE STEPS BELOW.

- Start with the year you were born.
- Add the number of years you are going to live to the year you were born.
Example: born 1995 (this will be the first year date on your lifeline)
+ 76 estimated years to live
2071 year you will live to (this is the final year date on your lifeline)
- You must create 20 events in your life on this lifeline.
- The first 5 events have already happened in your life.....from birth till now, 2009.
- The remainder of the events (15) are **all in the future**.
- The life-line can run vertical or horizontal on the page.

- Include personal things/goals that might be in your future, such as education, personal, a home job, marriage, children etc.
- Also, think about some **national or international events** that might take place in the future, such as **inventions/problems/famous people/etc.** Be creative, BUT realistic!
- Add **colorful drawings** to your time-line to add interest.
- **DO NEAT & CREATIVE WORK.**
